TERMINALES REUTILIZABLES Serie 400

En el exigente mundo de la hidráulica móvil y la maquinaria pesada, una manguera dañada es una operación detenida. Cuando la falla ocurre en sitios remotos, esperar el traslado a un taller de prensado no es una opción viable.

A diferencia de los sistemas convencionales que dependen de prensas hidráulicas (Prensadoras de mangueras) y energía eléctrica, los terminales reutilizables están diseñados con un sistema que permite realizar el ensamblaje utilizando únicamente herramientas manuales estándar (morsa y llaves), garantizando un sello hermético y una sujeción mecánica equivalente a un prensado de fábrica. -

Advertencia de uso : Aunque son extremadamente robustos, los terminales reutilizables están diseñados para mangueras trenzadas (R1, R2). NO deben utilizarse en mangueras de ultra-alta presión con refuerzo en espiral (R12, R13, R15) o transmisiones hidrostáticas de última generación, donde el prensado es obligatorio por seguridad.
